

## The Viridian TV Antenna System

Each Unit at The Viridian has a TV amplifier installed behind the Intrahub. This TV amplifier requires remote power from a power supply located in the lounge room to give you TV reception with no issues.

### Troubleshooting

If you are having trouble with any of your free to air channels please check the following.

#### Step 1.

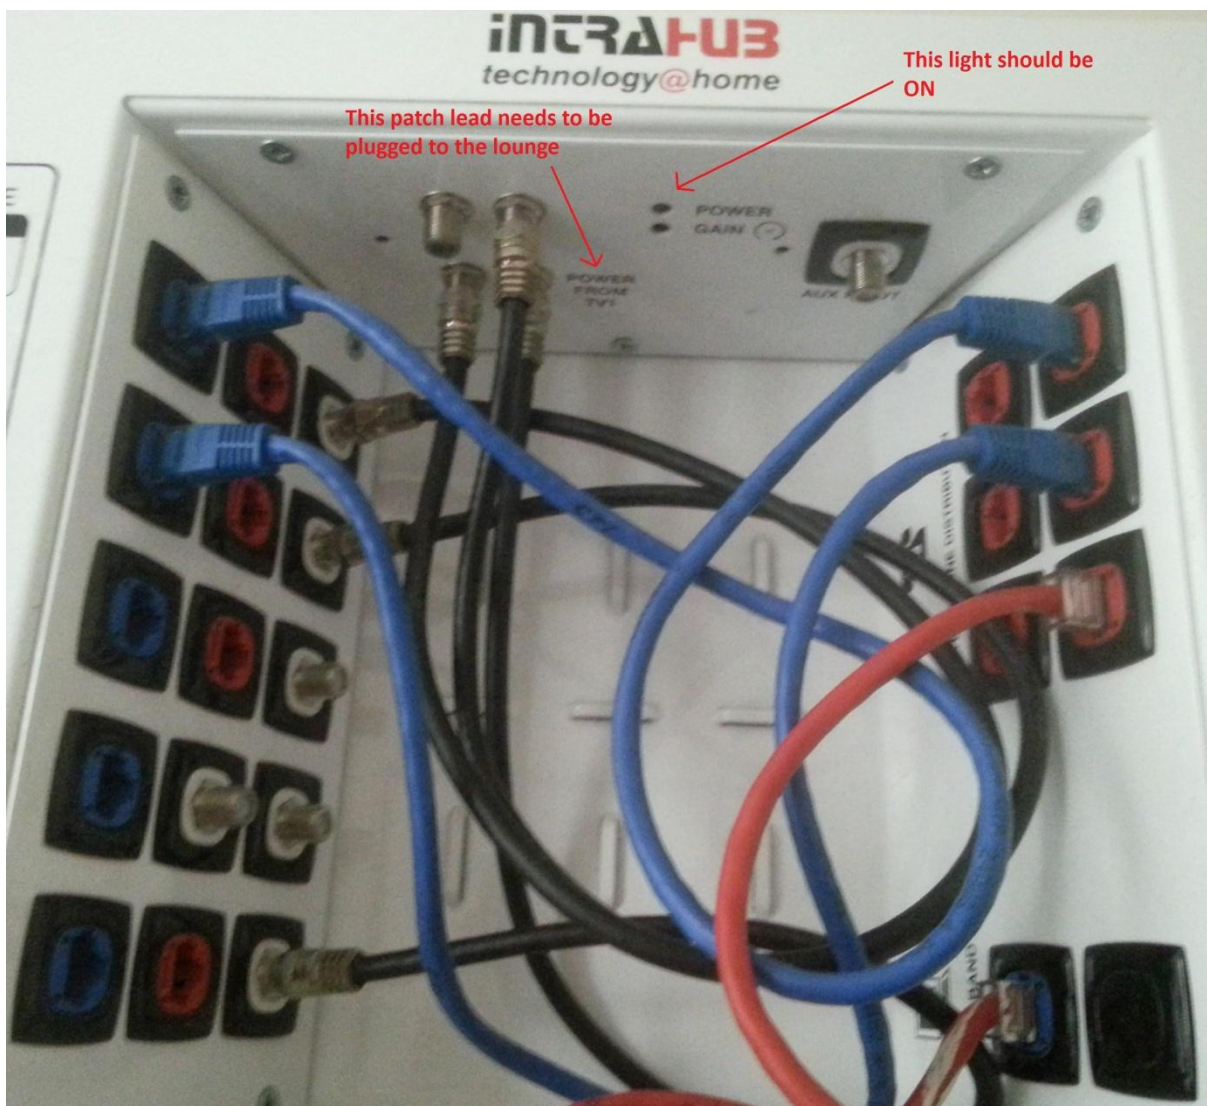

Ensure that in your Lounge room a power supply is plugged into the TV outlet labelled for Free to Air (FTA) and that it is plugged into power. Please also make sure the lead from your TV is plugged into the power supply too. (Please note that a set top box or recorder will not supply enough power back to power the amplifier for it to operate.)

If you do not have a power supply you will need to purchase one. I would recommend either a Matchmaster PSD14 or a Kingray PSK06.

## Step 2.

At your Intrahub ensure that the patch lead is plugged into the lounge and the other to the back right connection labelled POWER FROM TV 1. Next to this on the right the light indicating POWER should now be visible and your TV's will now be working without any fault.

Remember to re-tune your TV's to take full advantage of this.
